

EGG, Improved Cable Brush

Num: Eldon_0709_014

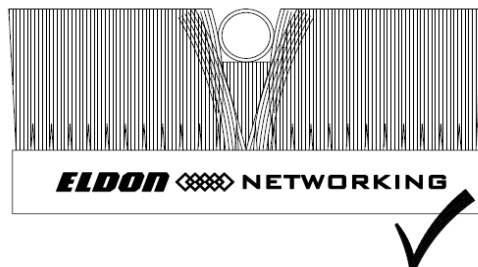

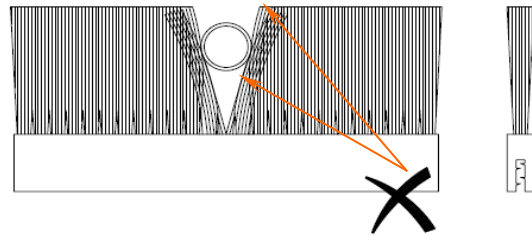

Improved Cable Brush, EGG

Dust protection

The release of a new type of cable brush for our rack systems is a direct result of our program of continuous product improvement. The new EGG cable brush is not only quick and easy to install, but is the best way of closing an opening in a panel for (patch)cable entry.

We felt it was important to improve the conventional cable brush, because small gaps can appear when cables are run through the brush, which potentially lets dust enter the rack.

The solution is simplicity itself! When cables are run through the cable entry the brush "pushes" the (patch)cables to the far end, therefore closing the gap around the cables. This provides a much better sealing of the opening around the cables and thus an improved dust protection within the rack.

The EGG cable brush solution will be implemented for all racks, enclosures and accessories, which use cable brushes.

The following Eldon ranges are affected: EIBox®, EIRack® and Multi-Flex®
